

Passport Resettlement Course

Aiden Donnellan

Aiden Donnellan attended a Telecommunications course with Omega Solutions Group as part of his resettlement course in September 2006, to prepare him for the difficult and daunting process of leaving the Royal Marines.

Aiden joined the Marines in 2000 after finishing college and then went on to become an Assault engineer and served in many troubled spots all over the World.

Upon his decision to leave the Marines Aiden found many area's of interest, including security, asbestos surveying, health & safety and telecommunications, but with further inspection telecoms seemed to be the only industry that held up to scrutinising.

So when Aiden arrived at OSG his first step was to successfully complete an Advanced Industrial climbing course which also consisted of Emergency medical response at height and a rescue climbing qualification.

The climbing course was a week long and took place with Bacou Dalloz. In his second week Aiden then went on to gain experience in RF hazards, Network design, Microwave theory and Line of Site.

Work experience followed in the third and fourth week putting all the skills learned into practice, days where long and work was hard but highly rewarding, the qualities required of a telecommunication engineer are initiative, sense of humour, problem solving ability and above all else commitment to get the job done no matter what obstacles may arise.

As a strong company in the telecommunication industry OSG is in a prime position to employ or find employment positions for its students in the telecoms sector and with the skill set you achieve in the four week resettlement course, finding work and leaving the forces should be a comfortable and hassle free experience. In OSG there is no such thing as problems just challenges which all engineers strive to beat.
